**Password = billing**

# Benefit of using the BILLING SaaS application

## Create Automated Reports

Reports help you track activity, so you know where your most profitable customers are, who is buying what at which times and whether or not there are fluctuations in spending patterns.

## Send Consistent Invoices

Automated invoices will be more consistent and professional-looking than those hand-made. With professional invoices that always look similar, your company will appear more reliable and organized.

## Bill Customers from Anywhere

You'll be able to access reports and financial information on the go, making it easy to keep up with what's going on with the company, even while on business trips and working vacations.

# Benefit of using the BILLING SaaS application

## Communicate with Clients Faster

Online billing means that clients get their receipts and other information right away. This speeds up the communication process, making it easier to resolve problems quickly.

## Get Paid on Time

With an online system, you can send automated reminders to customers and also them to set up recurring payments. This helps eliminate the risk of late payments.

## Stay More Transparent

At some point, it's inevitable that a customer will have a question about their bill. Whether it's a future payment or a past one that they're wondering about, you can ensure transparency.
